Writing a web application is an act of creation. When opening a new file and starting to write the code, I always aspire to create an application that users will find useful and efficient, and never have to worry about its inner working. This is what I have been doing for the past couple of years, and its what I would like to do for your company.

Professional Experience

PHP Developer/ Linux Administrator

6/2005 - Present SOTE Jakubowicz S.J. (www.sote.pl), Poznan, Poland

Responsibilities:

- Managing current operations (projects and product support)
- Preparing, developing and deploying the new version of the company's flagship product

Co author

10/2007 - 12/2007 - none -, Poznan, Wielkopolska

Along with a friend (www.whiteface.pl), we developed a software solution for group collaboration, document and file exchange.

We called the software 'Project platform', and initially developed it for a group of scholars at the Adam Mickiewicz University. My role in the project was to develop the engine, as a simple framework that could easily be extended when needed .

Later on i developed each module to our clients specification. My partner was responsible for the user interface and usability portion of the project, along with maintaining and establishing new business contacts.

So far the project has been deployed under:

- http://www.antyk.whiteface.unixstorm.org/

- http://tornado.poznan.pl/

- http://platforma.whiteface.unixstorm.org/

- http://www.slawistyka.whiteface.unixstorm.org/

We intend to continue development of this application.

PHP Developer/Webmaster

9/2005 - 7/2006 (freelance), Poznan, Poland

Various odd jobs, including graphics integration and script modifications on (among others) the following websites :

- www.modelcentrum.pl

- www.nastazja.pl

- www.bcmnowatex.com.pl/index.php

PHP Developer/Webmaster

12/2005 - 1/2006 CK Zamek (www.zamek.poznan.pl), Poznan, Wielkopolska

Co-author of Poznan's most recognized cultural center's website.

www.zamek.poznan.pl

The developers on this project were required to wave the right to any code produced and the project is currently being sold as a separate CMS system.
